

TRAINING AND EXCURSION FOR AUTHORITIES

INITIAL POSITION

The canton of Thurgau has set itself the goal of promoting the use of renewable energies. Therefore, the potential for large-scale wind power generation plants has been analysed for the whole area of the canton. An advisory group develops the basis for the future determination of potential wind energy areas in the cantonal structure plan. Members of this advisory group are cantonal offices (energy, economic, spatial planning, nature and landscape, building and environment, forestry), community, nature, and agricultural associations.

INTENSION

The advisory group participated in a half-day training and a full-day excursion to bring the knowledge concerning wind energy up to date. The topics of the training were spatial planning, forestry and landscape, noise emissions and noise protection ordinance, shadow flicker, protection of birds and bats. Each subject was introduced by us (about 10,) and then discussed with the group. We guided the tour to the southern Black Forest, where different types of newly installed wind energy plants were visited, partly also in the forest.

SERVICES

- Define the key issues for training and excursion
- Implementation training (half day)
- Moderation of group discussions
- Preparation of material
- Organize and manage the excursion

TIME PERIODE

Training: September, 2013

Excursion: August, 2013

CLIENT

Kanton Thurgau, Abteilung Energie | Promenadenstrasse 8 | 8500 Frauenfeld | Switzerland
